

3D Printed RC Planes

This section is the reference page for my 3D printed RC trainer plane. The idea began months ago when I stumbled upon this article on intractables on building a [RC DHC-2 Beaver](#).

I did a decent amount of work, but did not particularly like the accuracy of my hot glue gin process and the even weights I achieved with this approach. In the process of working with the concepts and trying to learn more about the technicalities of building RC planes, I found this [excellent free resource](#) with a lot of detailed info on the topic.
